

Background

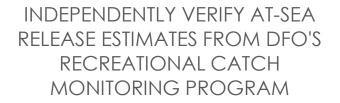

- Chinook recreational fishery closures were implemented to protect stocks of concern (2019).
- Chinook mark-selective fisheries (MSFs) were introduced in 2021.
- Additional MSFs were introduced in 2023, and reference fisheries were initiated in all pure MSFs.
- Pacific Salmon Strategy Initiative (PSSI) supported enhanced monitoring in 2023 & 2024 by:
 - Expanding dockside interviews and flights
 - Initiating a DFO-led Chinook Reference Fishery
- BC Salmon Restoration and Innovation Fund (BCSRIF) is supporting the Sport Fishing Institute of BC (SFI) to work collaboratively with DFO to provide guides and vessels (2023-2025).
- In 2024, a reference fishery was conducted in Area 28 (Howe Sound), which does not have an MSF.
- In addition, a reference fishery was conducted in Area 25 (Nootka) supported by the Pacific Salmon Commission, which does not have an MSF.

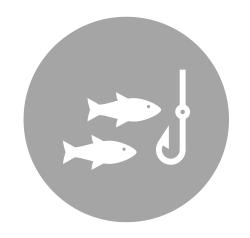

Reference Fishery Objectives

ESTIMATE PROPORTION OF "MARKED" CHINOOK (ADIPOSE FIN REMOVED)

IDENTIFY STOCK

IN A PURE MSF, NON-MARKED FISH
CANNOT BE OBTAINED DURING
DFO'S DOCKSIDE BIOSAMPLING

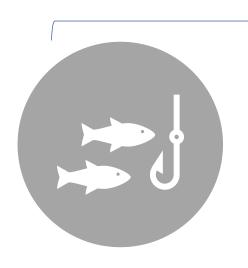

Reference Fishery Objectives

This analysis is underway:

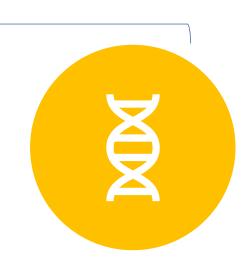

INDEPENDENTLY VERIFY AT-SEA
RELEASE ESTIMATES FROM DFO'S
RECREATIONAL CATCH
MONITORING PROGRAM

This presentation addresses these elements:

ESTIMATE PROPORTION OF "MARKED" CHINOOK (ADIPOSE FIN REMOVED)

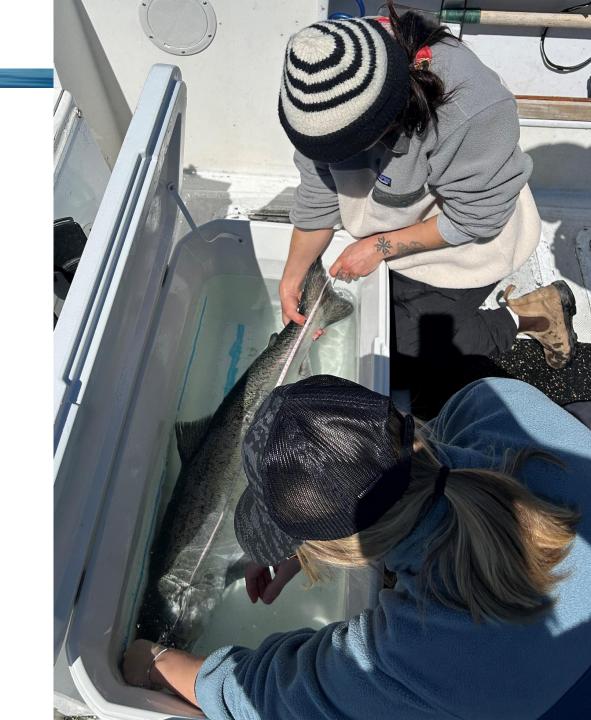

IDENTIFY STOCK

IN A PURE MSF, NON-MARKED FISH
CANNOT BE OBTAINED DURING
DFO'S DOCKSIDE BIOSAMPLING

Reference Fishery Methods

- Vessels and guides were chartered to maximize catch per unit effort.
- Guides were directed to fish how and where they typically would within a designated MSF to simulate the recreational fishery.
- Data Collection
 - Adipose fin clip
 - Legal and sublegal size
 - Tissue sample for stock ID
 - Scan for PIT tag
 - Fish condition
- Handling was minimized and all fish were released.

2023 Chinook Reference Fishery Data Summary

- 1084 Chinook were sampled across all reference fisheries
- Data are presented for:
 - All reference fisheries combined
 - Mark (adipose fin clip) rates
 - Stock composition
 - And by MSF/reference fishery
 - Mark (adipose fin clip) rates
 - Stock composition
- Full 2023 data report available at DFO Library https://science-catalogue.canada.ca/record=4125419~S6

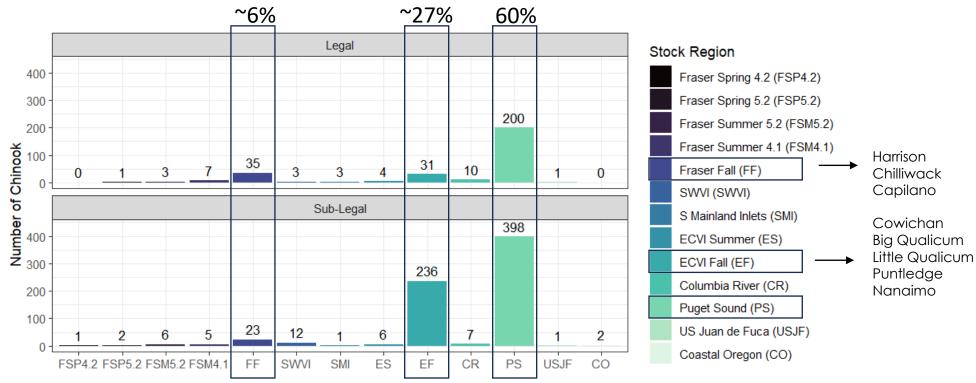

Mark rate of legal sized Chinook salmon sampled (N=1084) by month for all 2023 reference fisheries

Stock composition of legal (upper) and sub-legal (lower) sized Chinook salmon genetically sampled in **all reference fisheries combined** in 2023 (n=992).

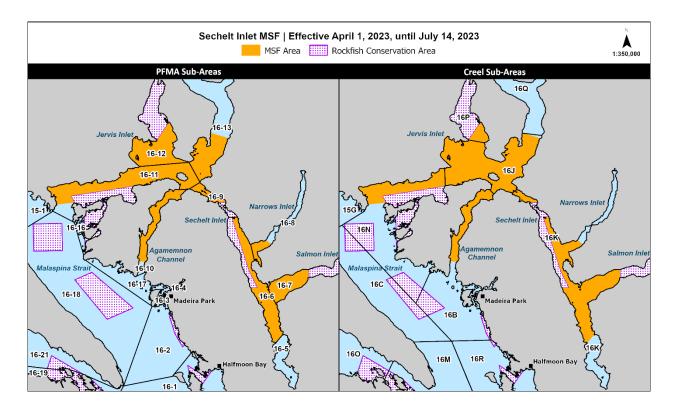

Fraser Fall Samples:

Harrison River: ~ 42%

Chilliwack River Fall: ~ 58%

Area 16 – Sechelt and Jervis Inlets Chinook Reference Fishery (only from June 14 – July 13, 2023)

Note: Catch locations were recorded at the **creel sub-area** level, which is slightly different from PFMA sub-areas.

Creel sub-areas, while existing within the same PFMA area, differ from PFMA sub-areas in their purpose and boundaries.

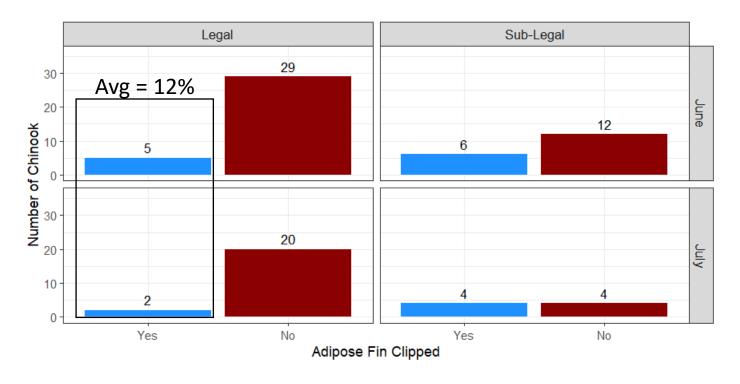

PFMA sub-areas are legally defined boundaries used for enacting regulations, established based on distinct landmarks for easy identification.

Creel sub-areas serve as spatial units for monitoring recreational catch and effort. Creel sub-areas were strategically designed to encompass all recreational fishing activity at popular locations within the same sub-area, with division lines placed in less frequented locations

2023 Reference Fishery Summary

- 1084 Chinook caught and sampled on 128 Boat Trips between May 3 and July 31, 2023; higher than average catch per unit effort was expected for chartered guides
- Mark rates were high in the Victoria ref fishery, low in the Sechelt/Jervis reference fishery, intermediate for Saanich & Gulf Is. and Becher Bay.
- Sechelt/Jervis and Becher Bay reference fisheries may not have been representative of the MSF since they were sampled later in the season. Sampling in these areas was more extensive in 2024.
- A high proportion of legal-sized fish were caught in Victoria and Sechelt/Jervis ref fisheries; low in Saanich & Gulf Islands and Becher Bay
- Puget Sound, ECVI Fall and Fraser Fall Chinook were the most abundant stocks intercepted
- 13 (1.3%) Fraser Chinook stocks of concern intercepted (Fraser Spring 4.2, Fraser Spring 5.2, Fraser Summer 5.2)
 - Between 1-4 fish intercepted in each MSF
 - All were either unmarked or sub-legal and would have been released if caught in the rec fishery
- A data report for 2023 was published in 2024 on the DFO Library https://science-catalogue.canada.ca/record=4125419~S6

2024 Reference Fishery Summary

- 2,582 Chinook were caught and sampled on 316 boat trips between April 2 and August 29, 2024; higher than average catch per unit effort was expected for chartered guides.
- We have stock ID for 2436 fish.
- Mark rates were high in the Victoria, Saanich & Gulf Is, and Becher reference fisheries.
- Mark Rates were moderate in Howe Sound and Nootka reference fisheries.
- Mark rates were low in the Sechelt/Jervis, Toba, Bute reference fisheries. (Bute and Toba are mixed-bag MSFs)
- Bute and Toba Inlets reference fisheries may not have been representative of the MSF since they were sampled later in the season. Sampling in these areas will be more extensive in 2025.
- Puget Sound, ECVI Fall and Fraser Fall Chinook were the most abundant stocks intercepted
- 12 (0.5%) Fraser Chinook stocks of concern intercepted (Fraser Spring 4.2, Fraser Spring 5.2, Fraser Summer 5.2)
 - All were either unmarked or sub-legal and would have been released if caught in the rec fishery.

Future Work

- Funding for PSSI reference fisheries in 2025 is pending.
- The plan for the 2025 reference fishery is to operate in the same locations as 2024 and cover either the same or more of the opening period (budget dependent).
- Funding for the Area 25 reference fishery is from the PSC and is for 3 years (2024-2026) so this will be continued.
- The 2024 data report will be available in Spring 2025.
- In addition, South Coast Stock Assessment is working on a comparative analysis to compare reference fishery results in 2023 and 2024 (mark rate and legal rate) with DFO recreational catch monitoring (creel) data.
